

TYPICAL SPECIFICATION FOR A **BREEDON GRAVEL FOOTPATH**

Breedon Golden Amber Gravel again installed to a camber (to shed surface water) levelled at 75mm thick giving a finished compacted thickness of 50mm

Where edgings are used we recommend the Breedon Gravel is brought up to the top of the edgings to assist the draining of surface water

MOT Type I Sub-base (to clause 803) laid to a camber. Minimum depth 150mm dependant on proposed load bearing and ground conditions

Weed suppressant membrane **IF REQUIRED** must be installed beneath the MOT Type I Sub-base and **NEVER** between the Breedon Gravel and MOT
